

'i sea, i care' Ambassadors in action ...

2016 got off to a great start with the Ambassadors taking part in their second workshop of the program, peer teaching.

After the session at Ricketts Point to inspire the new Ambassadors, the hard work of becoming effective champions to promote the marine environment begins.

Throughout the year, the Ambassadors stand up and speak in front of their peers and assemblies. These workshops develop skills and confidence to do this, whilst learning about some of our amazing animals and the threat from litter and pollution in a fun and interactive way. The third workshop later this term looks at litter and pollution in more detail.

Many thanks to the Ambassadors and staff at Yarraman Oaks and Silverton Primary Schools for being excellent hosts and making us so welcome.

King tides in Warringine Park

Warringine Park is an amazing local reserve down here in Hastings, with a variety of coastal habitats including mangroves, salt marshes and estuarine wetlands. They are home to a huge range of flora and fauna species such as swamp skinks, rakali (native water rats), tawny frog mouths, and swamp harriers that make their nests in the salt bush plants.

During exceptionally high tides, called King tides,

which happen several times a year, the park is completely flooded. In these photos you can see the water reaches right up to the boardwalk and submerges the path. It was quite an experience to see this phenomenon first hand last month.
